Portfolio Website: magro.dev | Markets, financial infrastructure, and technical systems

PROFESSIONAL SUMMARY

Markets and technology professional with 13 years in institutional trading, execution, and portfolio management, now building software across Web3, AI agents, open-source infrastructure, and e-commerce. Combines market-structure judgment with hands-on development in Solidity, Go, TypeScript, Python, EVM systems, and agent workflows.

PROFESSIONAL EXPERIENCE

Full-Stack, AI & Web3 Development | Freelance + RAMM.ai | Remote / New York, NY | 03/2024 - Present

- Freelance Full-Stack Development & Product Ventures (08/2025 - Present): Build and maintain e-commerce websites and custom software for clients; develop Hermes-based agentic workflows and open-source tooling; and prototype software-enabled business concepts progressing toward launch.
- RAMM.ai (03/2024 - 07/2025): Developed EVM marketplace contracts, the product frontend, and public website for an early-stage Web3 startup; translated on-chain mechanics into product requirements and presented the platform to retailers, partners, and users.
- Apply active crypto trading and protocol research to software design, with particular focus on liquidity, AMMs, execution, DeFi mechanics, market infrastructure, and risk.

Medical Leave, Recovery & Technical Retraining | Remote | 08/2022 - 02/2024

- Took medical leave after a severe injury requiring hospitalization and multiple facial and nasal reconstructive surgeries.
- Completed an extended recovery period that also included travel and family caregiving.
- Used the period for intensive computer science, Solidity, blockchain, and AI study through Harvard CS50, Boot.dev, Cyfrin Updraft, independent protocol research, and active crypto and DeFi trading.

Independent E-Commerce Operator | Self-Employed | Remote | 05/2019 - 07/2022

- Designed Python-based monitoring and execution workflows across retail platforms; analyzed secondary-market liquidity, pricing, and operational risk.
- Scaled a part-time operation into a full-time business with three consecutive years of six-figure profitability through automated execution in a constrained opportunity set.

VP, Fixed Income Portfolio Manager | PGIM | Newark, NJ | 04/2017 - 04/2019

- Managed global interest-rate and relative-value portfolios across U.S., Canadian, European, and Japanese markets, achieving a personal Sharpe ratio of 2.1 and contributing to multi-billion-dollar portfolio outperformance.

VP, Asian Hours Macro Execution | PointState Capital | New York, NY | 05/2015 - 02/2017

- Translated portfolio-manager intent into cross-asset fixed income, FX, equity, and derivatives execution as the real-time interface with global trading desks during Asian market hours.

VP, Proprietary Trading | Nomura Securities | New York, NY | 03/2011 - 05/2015

- Traded global rates, FX, and equities across U.S., European, and Japanese markets, delivering positive P/L annually with a personal Sharpe ratio of 2.4 versus a desk average of approximately 1.8.

Institutional Fixed Income Sales | Merrill Lynch & Jefferies | New York, NY | 07/2006 - 02/2011

- Covered institutional interest-rate clients within senior sales pods generating approximately \$45MM in annual production at Merrill Lynch and \$10MM at Jefferies; translated market structure, liquidity, and rates-product mechanics for institutional clients.

SELECTED TECHNICAL WORK

AMM Simulation Engine | magro.dev/projects/eth-amm-sim - AMM and EVM mechanics lab covering impermanent loss, fee accrual, concentrated liquidity, fixed-point math, and trading simulations.

Agent Runtime | magro.dev/projects/agent-runtime - Interactive architecture for session hydration, iterative agent loops, tool dispatch, verification, and persistence.

AI Infrastructure Financing | magro.dev/projects/ai-physical-infra-debt - Interactive research on GPU-backed term loans, data-center securitization, recovery scenarios, and AI build-out credit risk.

TECHNICAL PROFICIENCY

Software, Web & AI: Go, Solidity, TypeScript, Python, React, Next.js, Foundry, Geth, EVM systems, JSON-RPC, AI agents, Hermes workflows, automation, observability, and verification

Markets & Protocols: Market structure, liquidity, settlement, portfolio management, fixed income, macro, execution, risk, crypto trading, AMMs, and DeFi protocol mechanics

EDUCATION AND TECHNICAL TRAINING

B.S. Finance, Pennsylvania State University - Magna Cum Laude | Overall GPA: 3.73 | Major GPA: 3.93

Technical Training: Cyfrin Updraft | Boot.dev | Harvard CS50 | MIT OpenCourseWare | DeepLearning.AI

Community: Local library volunteer assisting new citizens with documentation and English; animal-shelter volunteer.

Interests: Pickleball, softball, and avid reading in the history of finance, economics, military affairs, and civilizations.
