Portfolio Website: magro.dev | Markets, financial infrastructure, and technical systems

PROFESSIONAL SUMMARY

Institutional markets professional with 13 years across rates, macro trading, execution, and portfolio management at Merrill Lynch, Nomura, PointState, and PGIM. Applies that judgment to public technical work in Ethereum systems, market infrastructure, and AI agents, targeting roles where markets, digital assets, and AI intersect.

PROFESSIONAL EXPERIENCE

Independent Technical Development | Remote | 08/2025 - Present

- Build and publish research, simulations, and interactive tools on financial infrastructure, Ethereum market mechanics, automation, and agent workflows.
- Publish public repositories, working demos, and tests that turn technical questions into inspectable artifacts.

Product and Web3 Platform Contributor | RAMM.ai | New York, NY | 03/2024 - 07/2025

- Built EVM smart contracts, the product frontend, and the public website for an early-stage Web3 marketplace.
- Served as the technical translation layer across product, contracts, partners, and users, turning complex marketplace and on-chain mechanics into product requirements, clear explanations, and external messaging.
- Presented the marketplace model and on-chain value proposition to retailers, prospective partners, and users at retail and Web3 conventions nationwide.

Independent Study & Active Markets | Remote | 08/2022 - 02/2024

- Completed Harvard CS50, boot.dev, and Cyfrin Updraft Solidity training, earning multiple blockchain and smart-contract certifications through AI-accelerated independent study.
- Actively traded crypto and DeFi markets with personal capital; extended travel through Europe, family caregiving in Florida, and ongoing animal-shelter volunteer work.

Independent E-Commerce Operator | Self-Employed | Remote | 05/2019 - 07/2022

- Designed Python-based monitoring and execution workflows across retail platforms; analyzed secondary-market liquidity, pricing, and operational risk.
- Scaled a part-time operation into a full-time business with three consecutive years of six-figure profitability through automated execution in a constrained opportunity set.

VP, Fixed Income Portfolio Manager | PGIM | Newark, NJ | 04/2017 - 04/2019

- Managed global interest-rate and relative-value portfolios across U.S., Canadian, European, and Japanese markets, achieving a personal Sharpe ratio of 2.1 and contributing to multi-billion-dollar portfolio outperformance.
- Integrated liquidity, curve, relative-value, and risk analysis into portfolio construction and execution.

VP, Asian Hours Macro Execution | PointState Capital | NY, NY | 05/2015 - 02/2017

- Translated portfolio-manager intent into cross-asset fixed income, FX, equity, and derivatives execution as the real-time interface with global trading desks during Asian market hours.

VP, Proprietary Trading | Nomura Securities | NY, NY | 03/2011 - 05/2015

- Traded global rates, FX, and equities across U.S., European, and Japanese markets, delivering positive P/L annually with a personal Sharpe ratio of 2.4 versus a desk average of approximately 1.8.

Institutional Fixed Income Sales | Merrill Lynch & Jefferies | NY, NY | 07/2006 - 02/2011

- Covered institutional interest-rate clients within senior sales pods generating approximately \$45MM in annual production at Merrill Lynch and \$10MM at Jefferies; translated market structure, liquidity, and rates-product mechanics for institutional clients and supported Jefferies' Primary Dealer designation process.

SELECTED TECHNICAL WORK

AMM Simulation Engine | github.com/DanDo385/eth-amm-sim

- Foundations lab for AMM economics, liquidity, fixed-point math, pricing, and EVM trading simulations.

Agent Runtime | github.com/DanDo385/agent-runtime

- Interactive runtime architecture for input handling, session hydration, iterative agent loops, tool dispatch, verification, and persistence across Python and TypeScript.

AI Infrastructure Financing | github.com/DanDo385/ai-infrastructure-financing

- Public research on the financing, power, compute, and market-structure constraints behind AI build-outs.

TECHNICAL PROFICIENCY

Markets and Financial Infrastructure: Market structure, liquidity, settlement, portfolio management, fixed income, macro, execution, risk, DeFi protocol mechanics

Agent systems: Runtime inspection, tool use, session state, structured interfaces, observability, and verification

Programming and Protocol Tooling: Go, Solidity, TypeScript, Python, Foundry, Geth, EVM systems, JSON-RPC

EDUCATION AND TECHNICAL TRAINING

B.S. Finance, Pennsylvania State University - Magna Cum Laude | Overall GPA: 3.73 | Major GPA: 3.93

Technical Training (2022 - 2024): Cyfrin Updraft | Boot.dev | Harvard CS50 | MIT OpenCourseWare

Community: Volunteer at the local library assisting new citizens with documentation and English; animal-shelter volunteer.

Interests: Pickleball, softball, and avid reading in the history of finance, economics, military affairs, and civilizations.
